

Assignment: Mobile Application Project

Planning Using Taiga

App Name: SmartBudget

Problem Statement:

Many students struggle to manage their daily expenses and often overspend without tracking where their money goes. There is no simple system that helps students monitor their spending habits. This leads to poor financial planning and unnecessary expenses. A mobile application is needed to help students track income, expenses, and monthly budgets easily.

Target Users:

College students and young working professionals.

REFLECTION:

Agile is suitable for my mobile application because requirements may change based on user feedback. For example, users may request new features like dark mode or notifications. Agile allows flexible planning through sprints and backlog reprioritization. Taiga helped in organizing user stories, assigning priorities, and planning sprint tasks clearly. The sprint board made it easy to track progress and break stories into smaller tasks. When a new requirement was introduced, it was added to the backlog and planned for the next sprint without affecting ongoing work. This shows how Agile handles change effectively. The challenging part while using Taiga was understanding story points and sprint capacity at first, but after practice it became easier. Overall, this assignment helped me understand how real-world mobile apps are planned using Agile methodology.
